Introducing...

ACTION[®]

making a material difference[™]

Action[®] Equestrian Pads

The ACTION pad was originally designed for the medical community to prevent and help cure decubitus ulcers, commonly known as bedsores. The Akton[®] material is not a gel, but a solid visco elastic polymer. It contains no latex, silicon, or plasticizers, and compares to no other in its class. It has been successfully used for over 30 years worldwide, and is now being introduced to the United States equestrian market to offer the same protection to horses and riders.

- ACTION pads aid in the prevention of ulcers by distributing pressure evenly and reducing friction. These same characteristics help reduce the factors that lead to saddle sores.
- AKTON material has been used as an equestrian saddle pad for over 10 years, from beginning and pleasure riders, to therapeutic riders, as well as by Olympic riders who compete in international competitions. Over 60,000 units have been sold worldwide.
- ACTION equestrian pads have superior shock absorbing qualities, yet are thin enough to maintain close contact with the horse.
- ACTION equestrian pads contour themselves to both the saddle and the horse's back, yet will always return to their original shape. This unique rebounding property allows the same pad to be used for multiple saddles and mounts.
- ACTION equestrian pads will not bottom out or leak as alternative gel or air pads may.
- ACTION equestrian pads can be refrigerated to cool (and remain soft even after freezing), or soaked in hot water for use as a thermagen or used "as is".
- ACTION equestrian pads come in a variety of shapes and sizes and are designed to fit a wide range of English, Western and Dressage saddles. There are models available for use under, as well as on top of, the saddle, to bring maximum comfort and protection to *both* horse and rider.

Don't you and your horse deserve the best in protection?
